

Dear Fellow Baconators,

Melanie was down for the count with an ear infection, so Tief brandished the torch tonight.

Susie Morlock lead the group in a lovely prayer that her family shares each Christmas, followed by The Pledge of Allegiance.

Tief presented Tien, Kaekai and Jenny with a Christmas present from the group. Check the MMF FB page for a photo of the gracious recipients and grateful presenter.

Tief asked “How about the Fauci testimony?”

Break for dinner of Biscuits and Gravy (with sliced breakfast sausage), potato salad and some absolutely wonderful Christmas cookies from Jenette Ervin. Thanks Jenette!

Afterwards, Tief asked if we remembered “the pandemic of the unvaxxed?” Why yes, we did remember it. She went on to provide some statistics that expose the lie of that narrative. Of the new COVID cases resulting in death, 90% are 65 and over, but that age group is 94% vaxxed.

The 2022 election results have been certified by the Marin County BOS and the winning candidates have been sworn in.

Janine Pera shared a 2-minute speech she gave to the BOS two weeks ago, which you can review at the bottom of this report. One interesting statistic shared is that the vax appears to increase the risk of contracting RSV. How wonderful!

Janine is pursuing information on a horrible accident in which a 22-y-o was killed in an auto accident this past weekend while on his way from Petaluma to Finnegan’s in Novato where he worked. Apparently, he was found in full cardiac arrest by Marin County sheriffs and later died. Janine remains in contact with the sheriff in an effort to learn if this was a vaxxed-induced “sudden death.”

Mia Camera mentioned that she was told by a Finnegan’s employee that it was a “tough month for them” because they had recently lost another employee that died suddenly, a 28-y-o female.

The State of Florida in performing autopsies on unexpected “sudden deaths.” She notes that such deaths are not recorded by hospitals because they occur at home or outside the hospital.

Tina Menard noted that the Gov. De Santis is launching a grand jury investigation into the COVID vaccines. Yeah!

Mia took the mike to repeat what she heard on a Dennis Michael Lynch (DML) podcast – the unvaxxed cause more auto accidents! Why? Because they’re “rule breakers.” Good to know.

Mia then went on to describe the “pariah” treatment she recently received at her long-time dentist’s office. They were shocked to learn that she was unvaxxed and relied on Front Line Doctors. Her dentist didn’t have a clue who Dr. Peter McCullough was, or any of the other

December 14, 2022

notable vax skeptics in the medical profession. Staff looked at her in disbelief. She went on to point out that she has been in contact with people sickened by the flu or RSV while doing her her job but has managed to avoid contracting anything herself.

Staff felt that she was “riding herd immunity,” meaning that she was benefitting from those that got vaxxed. The nonsense of that belief could not be overlooked. For one, the vax doesn’t prevent one for contracting or spreading COVID. For another, “herd immunity” is associated with the natural immunity obtained by contracting and recovering from COVID. In other words, it is they that are benefitting from Mia’s “herd immunity.”

Todd Morris shared that he needed to use his “no mask” card at a recent visit to the doctor.

Tief provided some good news in the for of Gavin Newsom underperforming in his 2022 contest as compared to his 2018 initial run and the 2021 recall (which had the same winning percentage. Hmm.)

Yours truly then provided an update of the Marin GOP Election Integrity Committee. Although the election has been certified, our final report is not yet complete. One reason is that we’re not getting all the data we’ve requested of the Registrar of Voters (ROV).

For one, we’d like the number of REPs and DEMs that voted in the 2022 general. Not who they voted for but how many of each voted. They claim that data is not available, but we know that is untrue because they provided the requested data for several primary elections.

The other potentially huge item is the final ballot count, which appears to be missing roughly 8,700 ballots from Vote Centers. These are very likely Republican-rich votes and the ROV has yet to reconcile their totals split by the number of VBM-plus-Drop-Box ballots and the number of Vote Center ballots. We’re not getting effective help from Marin GOP leadership, either.

This initiated a discussion of current Marin GOP leadership. A few attendees aired their experiences and complaints of current Marin GOP leadership. Names were named.

What can Marin conservatives do to affect change in the Marin GOP? Very little. They have support from about 2/3 of the voting Members, so mass public participation at our regular meetings won’t help. The best you hope for is to influence regular Central Committee members so that they will begin to vote with us.

Tief took the floor once again to close out the evening and left us with these important local issues that MMF will address next year:

- Downtown high-rise developments
- Homelessness
- Rent control

Next MMF meeting will be January 11, 2023 at 6:00 pm. See you then!

That’s all for now, Frank

December 14, 2022

Janine Pera's Two-minute speech to the Marin County BOS two weeks ago:

In October, we saw an unusual, off-season, spike in RSV cases. RSV is a respiratory virus, which can be particularly dangerous in young children.

In the clinical trial for Moderna's pediatric COVID-19 vaccine, the children who received the vaccine, experienced higher rates of RSV, than those who received the placebo. In Pfizer's pediatric COVID-19 vaccine trial, RSV was listed as one of the serious adverse events among the children who received the Covid shot.

The FDA's vaccine advisory committee noted the correlation, and stressed, the importance of continued safety, surveillance, in particular for respiratory infections, RSV, and pneumonia, in young children.

Despite the safety signals, and the committees advice, the FDA, the CDC, and our local health department seem to be ignoring, the correlation between increases in RSV and COVID-19 vaccines. These agencies continue to recommend, and promote the vaccines for all eligible individuals, including children.

We are told, Pfizer may soon have an RSV vaccine available. If their COVID-19 vaccines are responsible for the rise in RSV, why would we subject our children to yet another experimental shot?

and

11-18-22

Current statistics from Marin County, CA Public Health Department:

July 1, 2021 through November 18, 2022

81 Confirmed Deaths from Covid-19 in Marin County

Vaccine status of the deceased individuals:

17 (21%) completely unvaccinated

4 (5%) partially vaccinated

26 (32%) completed initial series

32 (40%) initial series & one non bivalent booster*

December 14, 2022

2 (2%) initial series & 2 non bivalent boosters*

0 (0%) bivalent booster**

Therefore:

60 (74%) were fully vaccinated (2 weeks after initial series, or 2 weeks after initial series and 1 or 2 non-bivalent boosters)

4 (5%) were partially vaccinated

17 (21%) were completely unvaccinated

*the 2nd non bivalent booster was first available on 4-1-22

** the bivalent booster was first available on 9-6-22
